

BACKGROUND SOUNDS

You can select the environmental sounds to be played in the background of a phone call

You can reproduce an environmental situation during a phone call (e.g., “motorcycle”, “sidewalk”, “airport”, “restaurant” etc. and other personally recorded ones).

You can set the volume and the reproduction mode (once, continuous or repeated).

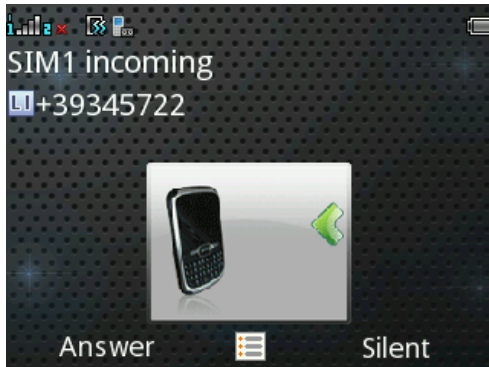

The phone has a collection of **10 preinstalled effects**, to which the user can add another 10 personalized ones in .wav format (8 Hz sampling at 16 bit resolution). This option can be set by **default** or you can choose to activate it when you **get an incoming phone call**.

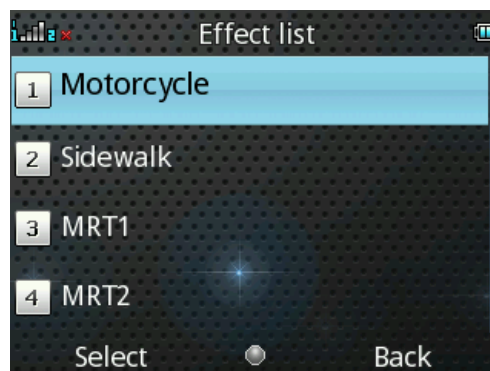

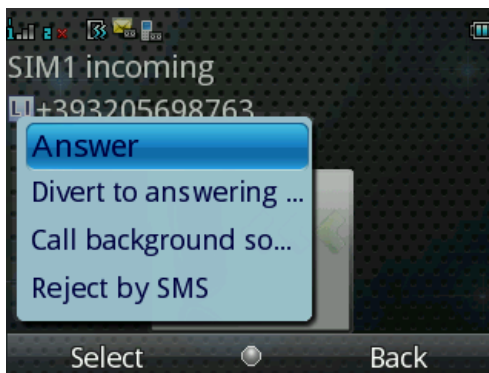

BACKGROUND SOUNDS

When you receive an incoming call or even during the conversation, by selecting “options” you access the menu from which you may choose the desired sound.
