

SMS TIME SENDING

You can postpone the sending of an SMS at defined time points

This function allows the user to write an SMS today but to decide **sending it later**, defining **date and time**.

Accessing the dedicated menu, you can insert:

- Sending date and time
- Recipient's numbers
- Message content
- Chosen SIM for sending
- In a few models it is possible also to periodically repeat the sending (every day, week, month, year)

The menu «**Schedule SMS**» will contain all the programmed messages, so the user can decide to activate them easily with a check.
