# BLOCK ANONYMOUS AND/OR NOT IN PHONEBOOK

You can block incoming calls from anonymous callers or unknown numbers

Access the settings menu from the "Call Firewall", it is possible to activate both functions.

By setting the calls block from "**Block not in phonebook**", you will allow incoming calls only from contacts in your phonebook.

By setting "**Block anonymous**", you will not allow calls from numbers with hidden caller ID.

When blocking the numbers not in phonebook, automatically the anonymous ones will be blocked, too.

The "blocked" person will hear a "**network error**" signal, no call rejecting. Eventually, if the active services allow it, the operator will notify the phone number of the caller that tried to contact you.
